

USB HUB WITH SOFT SELECT PORTS

ABSTRACT

The present invention is directed to a USB hub with soft select ports. A universal serial bus (USB) hub suitable for indicating a user-selectable number of ports may include a universal serial bus (USB) hub suitable for facilitating universal serial bus (USB) communication between a host and a device. A register suitable for storing an actual port value indicating a number of universal serial bus (USB) ports connected to the universal serial bus (USB) hub may be included, the actual port value suitable for being changed by a user.
